五年级(上)分数加减法训练题(九)

1、直接写出得数。

$$2\frac{3}{5} + 1\frac{1}{2} =$$
 $3\frac{1}{6} - 1\frac{1}{2} =$ $4\frac{5}{9} + 3\frac{1}{2} =$ $5\frac{5}{7} + 6\frac{3}{4} =$ $8\frac{1}{3} - 1\frac{5}{7} =$

$$3\frac{1}{6} - 1\frac{1}{2} =$$

$$4\frac{5}{9} + 3\frac{1}{2} =$$

$$5\frac{5}{7} + 6\frac{3}{4} =$$

$$8\frac{1}{3} - 1\frac{5}{7} =$$

$$6\frac{1}{12} - 2\frac{5}{6} =$$
 $9\frac{5}{8} - 7\frac{1}{3} =$ $5\frac{5}{8} - 1\frac{5}{6} =$ $8\frac{4}{9} - 5\frac{1}{3} =$ $9\frac{1}{2} - 2\frac{6}{7} =$

$$9\frac{5}{8} - 7\frac{1}{3} =$$

$$5\frac{5}{9} - 1\frac{5}{6} =$$

$$8\frac{4}{9} - 5\frac{1}{2} =$$

$$9\frac{1}{2} - 2\frac{6}{7} =$$

2、脱式计算:

$$6\frac{4}{5} - 1\frac{2}{7} - \frac{4}{35}$$

$$6\frac{4}{5} - 1\frac{2}{7} - \frac{4}{35}$$
 $14 - (2\frac{1}{3} + 6\frac{1}{2})$

$$5\frac{3}{7} - (2\frac{3}{7} + 1\frac{4}{11})$$

$$3\frac{1}{4} - \frac{1}{2} - \frac{2}{3}$$

$$3\frac{1}{4} - \frac{1}{2} - \frac{2}{3}$$
 $13\frac{2}{5} - (2\frac{3}{4} - 1\frac{1}{2})$ $4.8 + 3\frac{5}{6} - \frac{1}{6} + 5\frac{1}{5}$

$$4.8 + 3\frac{5}{6} - \frac{1}{6} + 5\frac{1}{5}$$

$$13\frac{4}{5} - 1\frac{3}{10} - 1\frac{1}{2}$$

$$3\frac{5}{6} + 5\frac{2}{7} + 5\frac{1}{6}$$

$$1\frac{2}{5} + 1\frac{1}{3} + 3\frac{2}{3} + 0.6$$

$$3\frac{1}{5} - (2\frac{6}{7} - 1\frac{4}{5})$$

$$\frac{3}{5} + \frac{1}{6} - \frac{2}{3}$$

$$\frac{5}{6} + (\frac{1}{3} + \frac{1}{2})$$
